

→ Type 1960 / 1965

Type 1960 / 1965

Vent valve made of
brass with threaded
connection

■ SUITABLE FOR

Air, gases and vapours neutral

Steam

■ EXAMPLES OF USE

Vent valve for pipelines, pipeline systems, vessels and heat exchangers, in which the pressure should not fall below atmospheric pressure.

- Vessel emptying
- Protection against vacuum build-up in tanks, piping systems, heat exchangers and vessels in steam plants

■ CAPACITY CHART

$$\text{Conversion: Nm}^3/\text{h} \times \frac{1000}{3600} = \text{NI/s}$$

Type 1960 opening at -6 mbar (=0,994 bar abs.)

The flow rate increases with rising differential pressure.

Example size 1":

The flow rate at a differential pressure of 60 mbar amounts to 50 Nm³/h air which corresponds to 13.9 NI/s

The flow rate at a differential pressure of 200 mbar amounts to 82 Nm³/h air which corresponds to 22.8 NI/s

Type 1965 adjustable from -100 up to -800 mbar (from 0.9 to 0.2 bar abs.)

The flow rate is independent of the set pressure, however it increases with rising differential pressure.

Example size 1/2":

The flow rate at a differential pressure of 100 mbar amounts to 8 Nm³/h air which corresponds to 2.2 NI/s

The flow rate at a differential pressure of 400 mbar amounts to 26 Nm³/h air which corresponds to 7.2 NI/s
