

→ Type 620

Type 620

Float valve made of gunmetal
with copper float

■ SUITABLE FOR

Liquids

neutral and non-neutral

■ EXAMPLES OF USE

Venting of pressure tanks and -systems for filling and emptying and to purge liquid residues.

- heating systems in industrial- and building-technology
- venting of piping systems

The float valve has to be installed vertically at the highest point of the plant and at places where air build-ups can occur.

Decompression takes place, when the ball float is in the lowest position. In this position the air can freely escape through the valve. After decompression, the flowing water lifts the float and closes the valve so that no water can escape.

Venting takes place when the water level has dropped and the float releases the valve.

■ VALVE VERSION

Type 620

Air inlet and outlet via lateral bore holes in the seat screw
Order example for type 620 with connection 1/2": 620-15

Type 620d

Air inlet and outlet via seat screw with female threaded connection for size 1/2".

Order example for type 620d with connection 1/2" and seat screw with female connection 1/2": 620d-15 / 15

■ MATERIAL

■ SPECIFICATION

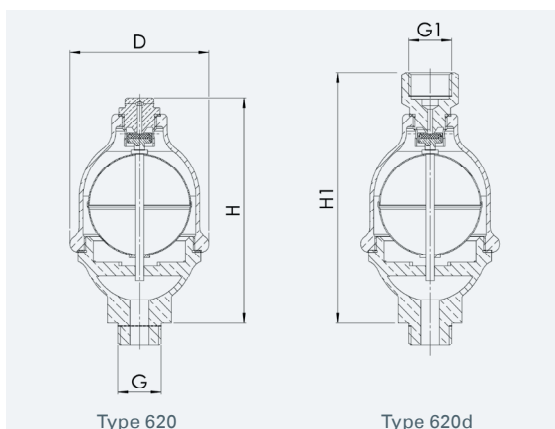

1/2"

from -30°C
to + 120°C

pressure-tight
up to 6 bar

■ NOMINAL DIAMETERS, CONNECTIONS, INSTALLATION DIMENSIONS

Type 620: Connection, Installation dimensions, Ranges of adjustment

Nominal diameter	DN	15
Inlet DIN EN ISO 228	G	1/2" (15)
Decompression 620d DIN EN ISO 228	G1	1/2" (15)
Installation dimensions in mm	D	65
	H/H1	110 / 115
Weight	kg	0,8
